

Identikey Server 3.1

Flexible and scalable software authentication server for SaaS applications: allows you to grow with your security needs.

An increased number of software deployments are shifting from a traditional approach to a SaaS or a Hosted Application model that offers minimal platform requirements, lower operational costs, and accessibility from anywhere, at any time. As with any online access model, static passwords used to access on-demand applications do not provide adequate data security. VASCO's DIGIPASS® multi-factor authentication technology eliminates these concerns by replacing insecure personal passwords with strong, constantly changing ones. It protects user login and insures only authenticated users gain access.

DESIGNED FOR ONLINE APPLICATION SECURITY

Identikey® Server 3.1 is the next-generation authentication server that supports DIGIPASS strong authentication on the backend. It verifies authentication requests from individuals trying to access on-demand applications and centrally administers user authentication policies. It is specifically built for online applications – recognizing the need to make minimal infrastructure changes yet providing a platform robust enough to grow with your customer base and security needs.

FLEXIBLE

Can be linked to any web-based application via its SOAP-based API allowing easy modifications to the server and applications as the organizations grow.

SIMPLE

Does not change the end user experience or IT infrastructure providing a simple way to add multi-factor authentication on top of existing applications.

FOCUSED ON THE CLIENT

Identikey Server 3.1 is a homogeneous platform that supports hardware, software, zero footprint, and mobile authentication right out of the box.

SCALABLE

Allows an easy expansion to add new users without revamping the existing IT infrastructure. Once you have integrated Identikey Server 3.1 into your online application, adding more users and/or applications is as simple as purchasing more licenses.

SUPPORTS MASS DEPLOYMENTS

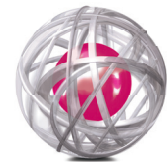

The functionality and operability of mission-critical on-demand applications will not be affected. Identikey 3.1 is designed to support tens of thousands of users. The server can run on multiple platforms and has provisioning for large deployments, such as redundancy, automatic replication, server failover, and others.

LOW TOTAL COST OF OWNERSHIP

Runs seamlessly on the existing infrastructure and does not require dedicated servers or appliances.

LOW HELP DESK INVOLVEMENT

Identikey Server 3.1 has several functions that allow users to self-register and change passwords, thus reducing helpdesk intervention.

KEY FEATURES

Interoperability

- SOAP API, LDAP, RADIUS

Centralized user management

- Web-based admin GUI
- Easy administration
- Accessible via any web browser from anywhere on the network
- New opportunities for outsourced service providers

Automated deployment function

- Bulk and auto management
- Dynamic user registration
- Flexible assign procedures for DIGIPASS authenticators
- Policy-based authentication
- Password auto learning

Comprehensive audit and reporting system

- Summaries on user history and DIGIPASS activities
- Extensive XML or HTML-formatted reporting for helpdesk troubleshooting, system and security auditing, and accounting
- Security audit function

Out-of-the-box provisioning

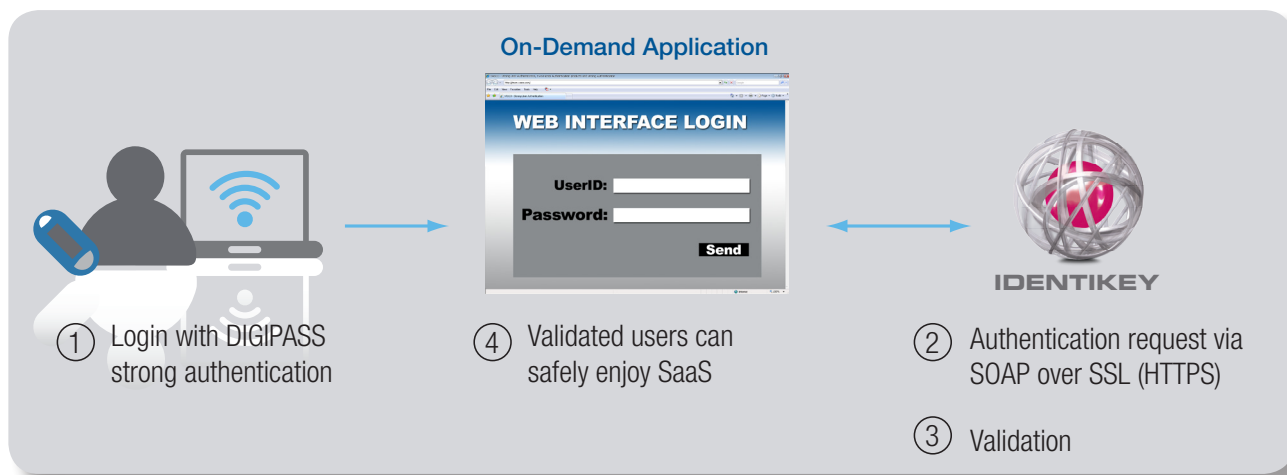

- Provisioning for software and mobile authentication

MORE OPPORTUNITIES FOR SERVICE PROVIDERS

Outsourced authentication services and Identikey Integration Program

The unique web-centered design of Identikey Server 3.1 allows managed service providers to host the server and offer strong authentication as an add-on service to their customers on top of their SaaS or other outsourced IT solutions.

- Identikey Server 3.1 provides ASP's with an authentication platform that can manage and administer several customers independently
- Extensive customizable reporting allows for easy invoicing
- Several customers can be hosted in multiple domains and managed by different delegated administrators
- The Identikey Integration Program was created to offer complete support to integration partners

About VASCO

VASCO® is a leading supplier of strong authentication and e-signature solutions and services specializing in Internet Security applications and transactions. VASCO has positioned itself as global software company for Internet Security serving customers in more than 100 countries, including several international financial institutions. VASCO's prime markets are the financial sector, enterprise security, e-commerce and e-government.
