

Identikey Server 3.1

Off-the-shelf software authentication server for banking applications: the flexibility of an API solution without extensive integration.

DESIGNED FOR MEDIUM-SIZED DEPLOYMENTS

Identikey® Server 3.1 is the next-generation authentication server that supports DIGIPASS® strong authentication on the backend. It verifies authentication requests from individuals trying to access banking applications and centrally administers user authentication policies. It is built with the customer in mind – providing support for hardware, software, zero footprint, e-Signatures, and mobile authentication right out of the box.

FULL-OPTION SOLUTION RIGHT OUT OF THE BOX

Identikey Server 3.1 offers complete functionality and management right out of the box without the need to dedicate significant budget and people resources, thus allowing for a cost-effective and fast rollout.

CAPABLE OF GROWING WITH YOUR SECURITY NEEDS

Built around VASCO's core VACMAN® authentication platform, Identikey Server 3.1 is flexible yet robust enough to offer the highest level of security in an admin-friendly package. It requires minimal infrastructure changes yet provides a sustainable platform to grow with your customer base and security needs.

FLEXIBLE

Can be linked to any web-based banking application via SOAP allowing for easy modifications to the server without the need for additional services or development resources.

SIMPLE

Does not change the end user experience or IT infrastructure providing a simple way to add multi-factor authentication on top of existing applications.

ROBUST

Supports remote user load from ten to tens of thousands. Server failover and database replication available. The functionality and operability of mission-critical banking applications will not be affected. The server can run on multiple platforms and has provisioning for large deployments, such as redundancy, automatic replication, server failover, and others.

SCALABLE

Allows for easy expansion to add new users without revamping the existing IT infrastructure. Once you have integrated the Identikey Server 3.1 into your banking application, adding more users and/or applications is as simple as purchasing more licenses.

FOCUSED ON THE CLIENT

Identikey Server 3.1 is a homogeneous platform that supports hardware, software, zero footprint, and mobile authentication right out of the box. It also supports e-Signature functionality for transaction validation to combat Man-in-the-Middle attacks.

LOW TOTAL COST OF OWNERSHIP

Runs seamlessly on the existing infrastructure and does not require dedicated servers or appliances.

PAINLESS ROLLOUT

Built-in automated deployment function reduces the helpdesk involvement. Provisioning for software and mobile authentication is available right out of the box.

KEY FEATURES

e-Signature functionality support

- Helps combat Man-in-the-Middle attacks

Out-of-the-box provisioning

- Built-in provisioning for software and mobile authentication

Interoperability

- SOAP API, LDAP, RADIUS
- Windows and Linux platforms supported

Centralized user management

- Web-based admin GUI
- Easy administration
- Accessible via any web browser from anywhere on the network

Automated deployment function

- Bulk and auto management
- Dynamic user registration
- Flexible assign procedures for DIGIPASS authenticators
- Policy-based authentication
- Password auto learning

Centralised authentication platform

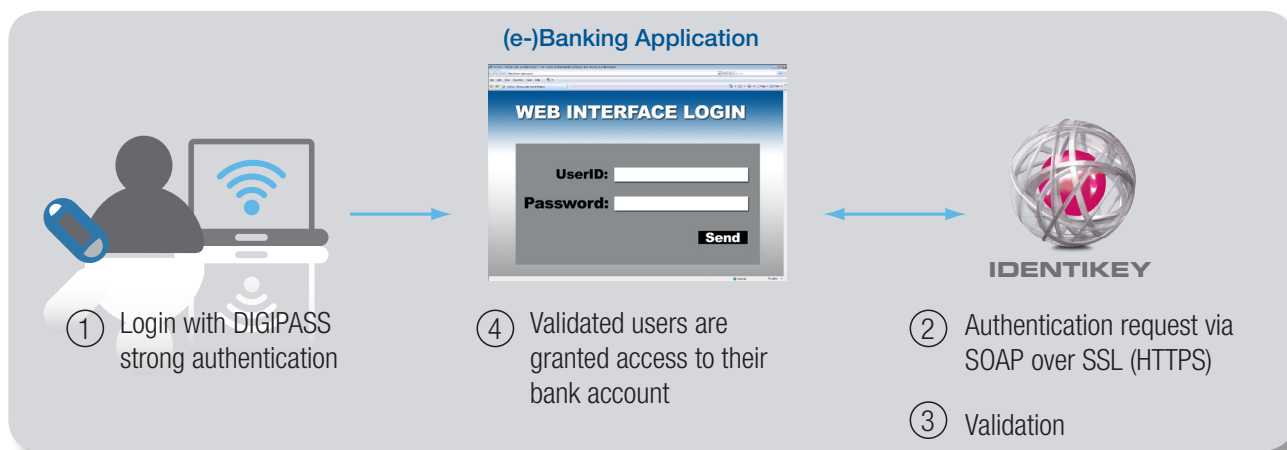

- Ability to support several applications (e-banking, mobile banking, corporate portals, etc.)

Comprehensive audit and reporting system

- Summaries on user history and DIGIPASS activities
- Extensive XML or HTML-formatted reporting for helpdesk troubleshooting, system and security auditing, and accounting
- Security audit function

PROTECT INTERNAL BANKING EMPLOYEES WITH THE SAME SOLUTION

In addition to protecting e-banking applications, Identikay Server 3.1 offers various extensions to secure employee remote access. Home workers, remote branch offices, and traveling staff can use the same DIGIPASS technology to safely connect through Firewall VPN, SSL-VPN or any other RADIUS equipment to the enterprise LAN and access internal servers, applications, and data storage. Company portals, Outlook Web Access e-mail, and Citrix Web Interface applications can be protected with strong user authentication at the same time.

About VASCO

VASCO® is a leading supplier of strong authentication and e-signature solutions and services specializing in Internet Security applications and transactions. VASCO has positioned itself as global software company for Internet Security serving customers in more than 100 countries, including several international financial institutions. VASCO's prime markets are the financial sector, enterprise security, e-commerce and e-government.
