

Secure Your Google account with
DIGIPASS[®] SecureClick

HOW TO SECURE YOUR GOOGLE ACCOUNT WITH DIGIPASS® SECURECLICK?

Google allows users to protect their account with FIDO U2F devices. You have at hand a DIGIPASS® SecureClick, so let's secure your Google account!

WHAT DO YOU NEED?

To secure your account you need to have installed Google Chrome browser version 40 or newer, your DIGIPASS® SecureClick (with possibly the DIGIPASS® Bluetooth Bridge if your computer doesn't support BLE (Bluetooth Low Energy) and a Google account.

ACTIVATING 2-STEP VERIFICATION IN YOUR GOOGLE ACCOUNT

Before starting, if your Google account is part of a Google Apps for Work and therefore managed by an administrator, your administrator must have enabled two-step verification before you can enable it on your side. Please ask your administrator to follow those steps: [Set up 2-Step Verification for your domain](#).

You now need to activate the 2-step verification in your Google account. In order to do so, you have to follow those steps on your Google account dashboard: [Turn on 2-Step Verification](#).

Once this is done, you will have to enter your mobile phone number as a backup solution. Then on the 2-Step Verification settings page, click the “Security Keys” tab, click the “manage” button and then click the “Add Security Key” button. Follow the steps and click the “Register” button and when asked to “insert (and tap) your Security Key”, insert, if needed, your DIGIPASS® Bluetooth Bridge in a USB port, and press the button of your DIGIPASS® SecureClick.

You will then see a screen displaying all devices that are registered to your account. You can easily add another DIGIPASS® SecureClick.

LOGGING IN TO YOUR GOOGLE ACCOUNT WITH YOUR DIGIPASS® SECURECLICK

Now that you have secured your Google account, when you login, you need to:

1. Enter your user **name and password**, and click the “**Sign in**” button.
2. You will then see this screen:
3. Insert, if needed, your DIGIPASS® Bluetooth Bridge in a USB port
4. Press the button of your DIGIPASS® SecureClick.

You can decide to trust this device (computer or mobile device) and therefore you need to tick the box “Don’t ask for my security Key again on this computer”. This will be remembered for 30 days.

Voilà, you are now securely connected to your Google account thanks to your DIGIPASS® SecureClick!
