

# KB 160122

## How verify the version of IDENTIKEY Authentication Server (IAS)?

Creation date: 23/06/2017

Last Review: 23/06/2017

Revision number: 2

**Document type: How To**

**Security status: EXTERNAL**

### Summary

This document explains how to determine the version IDENTIKEY Authentication Server (IAS).

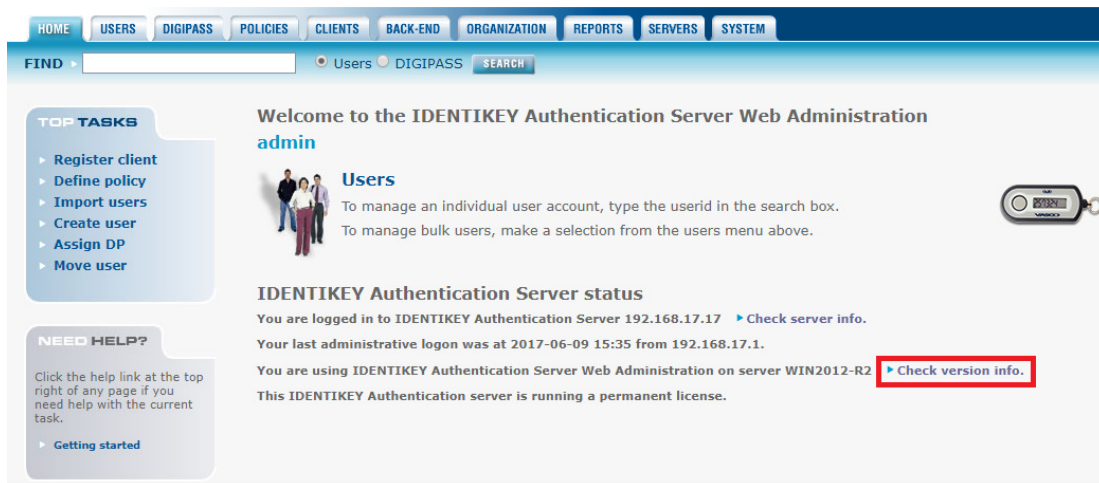

### Details.

#### Verify the version via IAS Webadmin

1. Log into the IAS Webadmin. The following format will show the URL format. Replace ip-address with the hostname or IP of the server.

<https://ip-address:8443>

2. Click on the "Check version info" link on the HOME tab

3. Note the IDENTIKEY Authentication Server version

**Applies to:** IDENTIKEY Authentication Server

### Verify the IAS version without browser access

1. Open the IAS config file

File location on Windows: C:\Program Files\VASCO\IDENTIKEY Authentication Server\bin\identikkeyconfix.xml

File location on Linux: /etc/vasco/ias/identikkeyconfig.xml

2. Look for the Version tag at the beginning of the file.  
The following example shows version 3.11.1.169

```
<Version>  
  <Module>  
    <Major type="unsigned" data="3"/>  
    <Minor type="unsigned" data="11"/>  
    <Patch type="unsigned" data="1"/>  
    <Build type="unsigned" data="169"/>  
  </Module>  
</Version>
```
