

VASCO: Compliant Digital Identity Protection for Healthcare

The proliferation of digital patient information and a surge in government regulations are forcing a shift in the healthcare industry. As the entire healthcare community adopts digital processes and web-based systems for patient data, the need for stronger security and compliance measures grows exponentially.

VASCO is a global leader in protecting the world's most sensitive information, and offers a suite of strong, scalable and easy to deploy solutions tailored to help healthcare organizations protect identities, safeguard patient records, and enable compliance with regulations - all without disrupting fast access to healthcare applications and patient information.

What We Solve

VASCO's healthcare solutions allow organizations throughout the industry to overcome their most pressing challenges, including:

- Validating identities of on-site and remote users accessing electronic health record (EHR) systems or patient portals
- Complying with federal and state regulations pertaining to e-prescribing of controlled substances (EPCS)
- Meeting patient data protection standards under HIPAA and the HITECH Act
- Fulfilling EHR meaningful use requirements for federal incentive programs
- Mitigating the risk of patient identity theft and medical malpractice
- Enabling secure access to data, without disrupting convenience for practitioners

Our solutions support the needs of a wide variety of healthcare organizations:

- EMR/EHR/HIE software providers
- Hospitals, clinics, labs and other healthcare facilities
- Health management and insurance companies
- Health information exchanges
- Medical billing and claims processing organizations
- E-pharmacies and e-prescribing vendors

Why Choose VASCO

VASCO offers a broad range of two-factor authentication and digital identity protection solutions tailored to healthcare organizations' regulatory and security needs:

- Compliance with healthcare regulations
- Strong security for digital healthcare data
- Native integration with on premise, cloud or mobile applications
- Interoperability with most healthcare software provider applications
- Secure and convenient to all applications with one authenticator
- Sociability and lower total cost of ownership

VASCO Healthcare Solutions

- **Identity Validation and Protection:** Identity proofing and two-factor authentication technologies that not only protect against fraudsters, but also comply with regulatory guidelines established by governing bodies like the NIST and DEA.
- **Regulatory Compliance:** FIPS-certified two-factor authentication technology that fulfills EPCS Compliance and EHR meaningful use criteria to ensure proper certification of HIT vendors and healthcare providers, and qualification for federal Medicare/Medicaid incentive programs.
- **Secure Access to Patient Data:** A comprehensive portfolio of two-factor authentication solutions that safeguard protected health information (PHI) and ensure secure access to EHR/EMR/e-Prescribing and other electronic systems across the entire healthcare ecosystem.
