

Solutions for HIT Vendors

Today, HIT vendors face mounting pressure to offer secure, intuitive systems and applications that comply with strict government regulations and meet growing demands for protection of identities and control over sensitive data. But ensuring the security and compliance of data can't disrupt fast access to healthcare applications and patient information.

VASCO helps HIT vendors to simplify the adoption of regulatory requirements for EPCS, while improving efficiencies and reducing fraudulent activity. Our solutions support identity protection and validation, fulfill supervised enrollment and two-factor authentication requirements of EPCS and EHR Stage 2 meaningful use, while maintaining the comprehensive audit trail required for compliance demands.

Compliant Digital Identity Protection Solutions

IDENTITY PROOFING

Securely and accurately deliver online identity credentials to physicians who are eligible to electronically prescribe controlled substances to patients. VASCO's Identity Proofing solution meets the NIST Special Publication 800-63 Assurance Level 3 requirements for multi-factor remote network authentication, a mandatory step toward complying with EPCS regulations.

TWO FACTOR AUTHENTICATION FOR EPCS COMPLIANCE DIGIPASS

GO 7 is VASCO's FIPS 140-2 Level 2 Certified One-Time Password (OTP) token - a convenient, single-button authenticator that satisfies requirements for EPCS two-factor authentication and EHR Stage 2 meaningful use.

MOBILE EHR COMPATABILITY

Increasingly, healthcare providers are using smartphones and tablets to access clinical software. VASCO's two-factor authentication hardware tokens enable healthcare workers to securely access patient records and prescribe medications via any mobile device, while meeting the "separate authentication device" rule established by DEA for EPCS compliance.

Why Choose VASCO

As global experts in identity protection and authentication, VASCO delivers best-in-class solutions that protect the most complex technical environments and improve provider workflows and productivity. HIT vendors that choose our products realize significant benefits, such as:

- **Seamless Integration:** Native integration into any on premise, cloud or mobile EHR/EMR/e-Prescribing application, so the same disaster recovery, load balancing and infrastructure you have in place today is not impacted.
- **Fulfillment Services:** Eliminate the need to manage inventory of hardware tokens, order processing and delivery. VASCO centralizes the shipping process and monitors inventory levels to ensure adequate stock.
- **Customization and Packaging:** Customize tokens with logos and colors or suggest custom packaging options that include user product guidelines, account registration instructions, FAQs, and other necessary information to reduce user confusion and help desk calls. Mobile authenticator customization options are also available.
